

want to make

drilling safer,  
more predictable  
& more profitable?

**Drillbit.** A complex process simplified.

Accurately predict drilling project costs and foresee break-downs

Create a safer working environment

Get replacements on time

Eliminate unproductive wage spend

# Online efficiency software for the mining industry

Drillbit is a drilling equipment control software which allows for the entry and reporting of information on drill assets via an internet application.

Drillbit speeds up the data entry process, has extensive usability and makes generating reports easy.

Drillbit provides significant return on investment because you can organise replacement of equipment faster, avoid stalling of projects, and therefore eliminate unproductive wage spending.

Drillbit provides an advantage to you when bidding for new drilling projects because the reporting tools enable a more accurate prediction of the cost of drilling new holes.

## Features & Capabilities

- + Management and data analysis is performed on holes, cutters, rigs, rods and other associated components of a drill.
- + You can also manage information on a hole relating to a specific project or location, as well as the drill components that are assigned to that hole.
- + Search, view and filter holes by a range of details with simple keywords and dropdown options.
- + Drillbit has excellent usability as you can quickly and easily track drill assets, see the status of equipment, view their location and monitor their progression and cost with a few mouse clicks.
- + Drillbit retains entry information, allowing for multiple items to be entered quickly.
- + Manipulate data into meaningful reports and download these reports in a range of different formats.

# Benefits of Drillbit

- + Accurately predict drilling project costs and foresee breakdowns
- + Improves efficiency
- + Speeds up data entry
- + User friendly application
- + High-level search ability
- + View anywhere online: Simple to use web based interface
- + Extensive reporting via data export in multiple formats

---

## Easy set-up

No extensive training is required

Ongoing software support available

Cloud hosted solution available or host yourself in-house

A complex process simplified
